

STAGE EQUIPMENT FOR SCHOOLS

Strong, Light, Portable!

Redcliffs Primary School, Christchurch

School halls and auditoriums are invariably multi use, so staging needs to be stored when not needed. For stages that are easy to install, dismantle, move and store, you can't go past ShowQuip's 2m x 1m portable decks. These fit snugly together in the required format (by students) then quickly removed when the space is required for something else.

- Quick assembly (no tools required)
- Light alloy construction for easy handling
- Interlocking decks for stability and no gaps
- Tough non-slip veneer surface (hard wearing and scratch resistant)
- Optional carpeted surface (for barefoot performers and noise dampening)
- Optional telescopic legs (adjust height as required)
- Storage trolleys, guard rails and stair sets can be made to order.

LIGHTING TRUSSES AND WINCHES

For safety and performance reasons the lighting for your stage should be fixed in a professional manner to structures called trusses. These typically comprise a lattice of alloy pipes that is surprisingly light yet exceptionally strong and stiff. ShowQuip imports and manufactures quality trussing that can meet a wide range of requirements and budgets.

To lower and raise the lighting truss to fix and adjust your lights, you need winches. ShowQuip supplies hand and mechanical winches to make this operation safe and easy. Once installed, ShowQuip's service team can maintain them to ensure long life and continued safety.

Complete Lighting Grid for Wairarapa College, Masterton
